eFleetWatch.com: The state of the art web site for tanker companies

Per Heidenreich, head of Heidmar Group, on invitation from INTERTANKO, described to the delegates attending the Sydney Tanker Event, his company's live interactive web-site. This site enables customers, pool partners, agents, brokers and vendors to access the company's database on the net.

Protected by passwords, information such as positions of vessels, port logs, operational details, financial voyage results, Pool results by vessel and daily and monthly reports are made available live 24 hours a day as vessels activities are updated from the three Heidmar offices around the world. The web-site [www.eFleetWatch.com](http://www.eFleetWatch.com) gives furthermore access to 50 oil company and terminal questionnaires that can be downloaded blank or automatically filled out from nearly 2000 fields of vessel data and sent by e-mail or fax from the web-site to charterers, brokers and terminals. Heidmar will soon launch [WWW.Q88.com](http://WWW.Q88.com) which will have this feature available for all owners to use during a 6 months trial period.

INTERTANKO has seen these web-sites and agree with many of the participants at the meeting in Sydney, who acknowledge Heidmar's computer system as the most advanced in the tanker industry today.
